

## D2L Binder & ePortfolio Apps

The [Binder App](#) requires one to create an [EduDentity](#) account. The user may simply sign up with an email address. The app is not tied specifically to the user's D2L account at the University of Calgary.

Binder/ EduDentity is set up in such a way that users can upload their own content, buy/rent textbooks from the Binder store without needing it to be associated with their UofC D2L accounts. There is integration built in so that when you go to your course and click on "Send to Binder", it will let you send course content to the Binder app, after you have logged in with your EduDentity account.

The [ePortfolio App](#) requires one to enter the URL of the institution's D2L learning environment (LE). In our case, it is <http://d2l.ucalgary.ca>

**CAS** credentials are required, which means that the app will *not* work for our Continuing Education students and users who have temporary/ local/ admin D2L usernames.
